# Total number of printed pages-4

# 3 (Sem-5/CBCS) ZOO HC 2

#### 2023

### **ZOOLOGY**

(Honours Core)

Paper: ZOO-HC-5026

(Principles of Genetics)

Full Marks: 60

Time: Three hours

# The figures in the margin indicate full marks for the questions.

- 1. Choose the correct answer:  $1 \times 7 = 7$ 
  - (a) In humans mechanism of sex determination is
    - (i) XX-XY; male heterogamety
    - (ii) XX-XX; female heterogamety
    - (iii) XX-XO; female heterogamety
    - (iv) XX-XO; male heterogamety

- (b) Kappa particles are responsible for extra chromosomal inheritance. Say yes or no.
- (c) A gene that affect more than one phenotype is called as \_\_\_\_\_.
- (d) Morphan's syndrome is as a result of
  - (i) Polygene
  - (ii) Pseudogene
  - (iii) Modifier gene
  - (iv) Pleotropic gene
- (e) All genes on the sex chromosomes are gender specific. Say true or false.
- (f) Cytoplasmic inheritance is carried out by \_\_\_\_\_ genes.
- (g) A gene with a Y chromosome is expressed exclusively in man/in women.
- 2. Answer the following briefly: 2×4=8
  - (a) What is three point test cross?
  - (b) Define induced mutation.
  - (c) What are base analogues?
  - (d) What is transduction? Who first describe this phenomenon?

- 3. Answer *any three* questions from the following: 5×3=15
  - (a) Explain incomplete dominance and codominance with suitable example.
  - (b) Describe Mendel's monohybrid experiment and state the conclusion derived. 3+2=5
  - (c) Describe the attached X method of mutation with suitable illustration.
  - (d) What is mar unit? Describe the coupling and repulsion hypothesis of linkage. 1+4=5
  - (e) Define aneuploidy. Discuss about different conditions of aneuploidy.

1+4=5

4. (a) What do you mean by interaction of gene? Describe the supplementary gene interaction with suitable illustration. Add a note on lethal allele. 2+5+3=10

# Or

(b) What is synapsis? Write about terminalization stage of crossing over. Explain the molecular mechanism of crossing over with suitable diagram.

1+2+7=10

5. (a) Define silent mutation. Explain the molecular basis of gene mutation. Write down the methods used to detect sex lethal mutation. 1+6+3=10

## Or

- (b) What is uniparental inheritance? How does it differ from Mendelian inheritance? Discuss the inheritance pattern of Kappa particles in paramoecium. 2+2+6=10
- 6. (a) What do you mean by episome? Explain the conjugation process in bacteria with suitable illustrations.

  2+8=10

## $\mathbf{Or}$

(b) What are insertion sequences? Give an account of different types of eukaryotic transposons. Add a note on genetic significance of transposons.

2+6+2=10
