PHYSICS

(Major)

Paper : 3.1

(Mathematical Methods-III and Electrostatics)

Full Marks – 60

Time – Three hours

The figures in the margin indicate full marks
for the questions.

GROUP-A

(Mathematical Physics)

Marks : 25

1. Answer the following questions : $1 \times 3 = 3$

(a) Define rank of a matrix.

(b) When a symmetric matrix is said to be Hermitian ?

(c) Find $\text{adj } A$ if $A = \begin{pmatrix} 0 & -i \\ i & 0 \end{pmatrix}$

[Turn over

2. Check whether the total angular momentum matrix for an electron given by

$$J^2 = (3\hbar^2/4) \begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix} \text{ is}$$

Hermitian and unitary. 2

3. Answer any two of the following questions :

2×5=10

(a) (i) If $A^2 + A - I = O$ find A^{-1} . 1

(ii) Show that the inverse of a matrix is unique. 2

Or

If A, B are two square, symmetric matrices of dimensions $n \times n$ find the condition when the product AB is symmetric.

(iii) Find the rank of the matrix 2

$$\begin{pmatrix} 3 & -1 & 2 \\ -6 & 2 & 4 \\ -3 & 1 & 2 \end{pmatrix}$$

(b) (i) Express the following quadratic form as product of matrices

$$ax^2 + by^2 + 2hxy \quad 2$$

(ii) What is an

(iii) Find the val

$$\begin{pmatrix} 0 & 1 \\ -1 & 0 \\ 2a & 2b \end{pmatrix}$$

is skew-sym

(c) (i) Show how ce
force appear
of a particle
respect to ro

(ii) "Sum of finite
rigid body c
rotations."

What operati
matrices A,
statement ?

4. Answer either [(a) an

(a) (i) Given the ma

$$A = \begin{pmatrix} 0 & 2 & 3 \\ 3 & -1 & 1 \\ 4 & 2 & 1 \end{pmatrix},$$

and the equation

Solve for x, y, z

(ii) Test whether the matrix

$$\begin{pmatrix} \cos \theta & 0 & \sin \theta \\ 0 & 1 & 0 \\ -\sin \theta & 0 & \cos \theta \end{pmatrix}$$

is orthogonal or not.

2

(b) (i) Consider the following transformation in three dimensions

1+2=3

$$x' = x \cos \theta + y \sin \theta$$

$$y' = -x \sin \theta + y \cos \theta$$

$$z' = z$$

Write down the transformation matrix A.

Show that $A(\theta_1 + \theta_2) = A(\theta_1)A(\theta_2)$.

(ii) Find the inverse of the matrix

2

$$\begin{pmatrix} 2 & -3 \\ 4 & 6 \end{pmatrix}$$

(c) (i) Test whether the following matrices are diagonalizable:

$1\frac{1}{2} + 1\frac{1}{2} = 3$

$$A = \begin{pmatrix} 1 & 1+i \\ 1-i & 0 \end{pmatrix}, \quad B = \begin{pmatrix} 2 & 1 \\ 0 & 2 \end{pmatrix}$$

(ii) State and explain Cayley - Hamilton theorem.

2

(d) (i) Calculate the

where $M =$

(ii) If $A = \begin{pmatrix} 0 \\ \tan \theta \end{pmatrix}$ matrix, show

$$I + A = (I - A)$$

GROUP

(Electro

Marks

5. Choose the correct op

(a) The induced surface charge q as (when

(i) $q' = q/k$

(iii) $q' = q \left(1 - \frac{1}{K} \right)$

(b) The electric potential due to a quadrupole at distance far off from its centre varies as

- (i) $1/r$ (ii) $1/r^2$
 (iii) $1/r^3$ (iv) $1/r^4$

(c) Electric field at a point close to the surface of a charged conductor having charge density σ is

- (i) $\sigma/4\epsilon_0$ (ii) σ/ϵ_0
 (iii) $\sigma/2\epsilon_0$ (iv) $\sigma/3\epsilon_0$

(d) Unit of electric potential in terms of base units of SI is

- (i) $\text{Kg m}^2\text{S}^{-1}$ (ii) $\text{Kg m}^2\text{S}^{-1}\text{A}^{-1}$
 (iii) $\text{Kg m}^2\text{S}^{-2}$ (iv) $\text{Kg m}^2\text{S}^{-3}\text{A}^{-1}$

6. Answer the following questions : $3 \times 2 = 6$

(a) Two charges $q_1 = 2\mu\text{C}$ and $q_2 = 3\mu\text{C}$ are placed at $(0, 0, 4)$ and $(0, 0, -4)$ respectively. Find the locus of points where potential is zero.

3

24/3 (Sem 3) PHY M1 (6)

Or

What is the net electric field due to the two infinite sheets of charge as shown in the figure?

(b) (i) Can the potential be a minimum in free space?

(ii) Show mathematically that the electric field is perpendicular to the equipotential surface $\phi(x, y, z) = \text{constant}$.

7. Answer either (a) or (b)

(a) (i) Compute the electric field given by

$$\vec{E}(x, y, z) = (x^2 + z^2)\hat{i} + (z^2 + y^2)\hat{j}$$

Is the field conservative?

24/3 (Sem 3) PHY M1 (7)

(ii) For the electric field $\vec{E} = (Kx^{1/2})\hat{x}$

where K is a constant, compute the electric flux through the face of the cube region depicted in the figure. 2

(b) (i) Using Gauss's law find an expression for the mechanical force per unit area on the surface of a charged conductor. 2½

(ii) Derive an expression for the equilibrium of an electrified soap bubble. 2½

8. Answer any two questions :

(a) (i) Four charges $q_1 = q_2 = -q_3 = -q_4 = q$ are arranged at points $(0, a)$, $(0, -a)$, $(a, 0)$ and $(-a, 0)$ in x - y plane. What is the electrostatic energy needed to compose such an arrangement, bringing the charges in from infinity? Also find the electrostatic potential in x - y plane.

2+3=5

24/3 (Sem 3) PHY M1

(8)

3500(G)

(ii) Show that an charges is equi monopole, dip

(b) (i) Two concentric a and b ($b > a$) V_1 and V_2 res equation to calc in the region

(ii) Use Poisson's e density in a re function is $V = a + 4b(x^2 +$

(c) (i) What is meant b Show how \vec{E} , isotropic dielec molecule a pola

(ii) Using Clausius how can the ator from dielectric c

24/3 (Sem 3) PHY M1

(9)

(d) (i) Determine the electric potential at a point on the axis of a charged disc of radius a and surface charge density σ . Show that the disc may be regarded as a point charge for far off points. $3+2=5$

(ii) Two equal point charges q are placed at equal distance b from the centre of a grounded conducting sphere of radius a where $b < a$. Calculate the force acting on each of the charges. 5

Total No. of printed pages = 500 on 10/11/15

PHYSICS

(Major)

Paper : 3.2

(Current Electricity and Magnetostatics)

Full Marks - 60

Time - Three hours

The figures in the margin indicate full marks for the questions.

1. Answer the following questions : $1 \times 7 = 7$

- Write down the Ohm's law that relates the conductivity, current density and electric field.
- Two inductances of co-efficient of self induction L_1 and L_2 are joined in series. What is the net co-efficient of self induction of the combination ?
- What do you mean by the time constant in series R-C circuit ?

[Turn over

(d) Why no power is dissipated if a voltage of sinusoidal waveform is applied across a purely inductive or capacitive circuit ?

(e) What is copper losses in transformer ?

(f) Write down the Biot-Savart law.

(g) What is magnetic vector potential ?

2. Answer the following questions : $2 \times 4 = 8$

(a) Set up the e.m.f equation of series LCR a.c circuit.

(b) In a certain thermocouple $E = a\theta + b\theta^2$, where $\theta^\circ\text{C}$ is the temperature of the hot junction, the cold junction being at 0°C , $a = 10$ microvolts / $^\circ\text{C}$ and $b = -\frac{1}{40}$ microvolt/ $^\circ\text{C}$. Find the neutral temperature and the temperature of inversion.

(c) Explain the differences between a 'dead-beat galvanometer' and 'ballistic galvanometer'.

(d) Draw the circuit diagram of Anderson's bridge for the measurement of co-efficient of self induction.

24A/3 (Sem 3) PHY M2 (2)

3. Answer any three of

(a) Establish that $\nabla \cdot \nabla = \nabla^2$.

(b) Write a short note on

(c) An alternating voltage is applied to a coil of inductance of 0.2 ohms in series. Find the potential difference across inductance.

(d) The e.m.f of a cell of which is kept at 25°C . Find the neutral temperature and Thomson co-efficient.

4. (a) Deduce an expression for the magnetic field at a long solenoid.

(b) An inductor ($L = 100\Omega$) and a cell ($\mathcal{E} = 10\text{V}$) are connected in series. Find the time taken for the current to reach 99% of its steady state value. [ln 100 = 4.6]

24A/3 (Sem 3) PHY M2 (3)

(c) Establish the relation $\pi_2 - \pi_1 = \frac{\pi_1}{T_1}(T_2 - T_1)$

where π_1 and π_2 are Peltier co-efficients.

Or

Why Wheatstone bridge is not suitable for measurement of very low resistance ?

Describe with circuit diagram how low resistance can be measured using Kelvin's Double Bridge. 2+8=10

5. (a) In a region the force $\vec{F} = q(\vec{v} \times \vec{B})$ on a charge q is zero. What conclusions can you draw from this ? 2

(b) Using the Biot-Savart law, obtain an expression for the magnetic field due to a long straight conductor carrying steady current. 8

Or
Define magnetic scalar potential. Obtain an expression for the magnetic scalar potential and hence magnetic field near a current carrying loop. 2+6+2=10

6. (a) Derive an expression to show the growth of electric current in a circuit with resistance and self-inductance. 5

24A/3 (Sem 3) PHY M2 (4)

3500(G)

(b) What is meant by resonance in an a.c circuit in series, find the condition for resonance is obtained.

What is meant by mutual inductance? Describe with circuit diagram. Ballistic galvanometer.

24A/3 (Sem 3) PHY M2 (5)
